

check out & check out over view

1- Prerequisites

- Last version of “SWAG LABS” website
 - internet connection
 - user Logged In
 - choose at least one item
-

2- Acceptance Criteria

- As a client user I want to be restricted from opening the checkout page unless I have added at least one item to my cart.
- As a client user who is successfully logged in and choose items will click on Menu icon then click on check out icon for enter personal data

The following check out data will be displayed for completion ,these fields are mandatory to complete , these are their details

field	data type	mandatory	is unique?
first name	string	yes	No
last name	string	yes	NO
postal code	integer	yes	NO

- first name accept letter only .
 - first name accept letter only .
 - postal code accept only numbers.
- As a client user who finalize check out page , click “continue” button to complete process
- As a client user when click on continue , he want to move to check out over view page
- As a client user, I want to see a clear and accurate summary of my purchases during checkout, so I can confirm my order before proceeding with payment.
- As a client user,
I want the checkout page to calculate the subtotal and total prices accurately based on item prices, quantities, and additional charges,
So that I can trust the final amount I'm being asked to pay is correct.
- ## expected result
- The client user selects items to purchase. They are redirected to the Checkout Page. The customer correctly fills in all required information (e.g., shipping address, contact details, etc.). After completing the form, they proceed to the Checkout Overview Page. On the overview page, the customer reviews and confirms that all entered information is correct .the process done.
 - the client user don't chose item so that “check out ” button don't fire.
 - The client user selects items to purchase. They are redirected to the Checkout Page. The customer correctly fills in all required information (e.g., shipping address, contact details, etc.). After completing the form, they proceed to the Checkout Overview Page . On the overview page, the customer reviews and confirms that all entered information is un correct. the client user should not continue.
 - The customer selects items to purchase. They are redirected to the Checkout Page .The customer incorrectly fills in all required information (e.g., shipping address, contact details, etc.). the website show error

dependencies
